THE BROCHURE

This brochure briefly reflects the basic information about the product, its stylistic orientation, and shows what interiors can be created using TAFFOR furniture.

For any additional questions about our products, please contact our company directly, visit our website www.taffor.com or contact the nearest representative..

This brochure is a reflection of our main assortment, main collections.

CATALOG

The catalogue contains the full range of our products and compared to this brochure includes much more additional information about our products, materials, processes.

The catalogue has no final state. It does not have the status "the catalogue is finished, the job is done, nothing will be added this year". The catalogue is like a living being. It is a reflection of what we can and want to do for you

now, today. And new ideas and opportunities may appear at any time, and they will be added to the catalogue.

For the most current and complete version of the catalogue, see the soft copy at: https://taffor.com/brochure_en or scan the QR code on the cover of this brochure.

AUGMENTED REALITY

All of our products have the ability to be «tried on» in your house using Augmented Reality technology.

Augmented Reality (AR) is a modern technology that allows you to add a virtual object to a real room. In our case, the virtual object is the furniture we produce.

To use this feature, you only need a modern smartphone or tablet and a browser.

AR technology is supported by smartphones with iOS and Android operating systems.

Some outdated smartphones may not support this technology.

WEB SHOWROOM

WEB showroom – the ability to 'walk around' a digital showroom in a web browser. This technology works in mobile and desktop browsers. We have tested the most popular browsers: Chrome, Edge, Opera.

See how it works right now:

- follow the link:
- <https://taffor.com/justM-BBQ>
- wait for Startup and Installation to finish
- if autorun is disabled in your browser, press the "Click to start" button
- after starting the scene, use the classic game key combination A-W-D and the mouse to move around

WEB showrooms have been created for each of our collections. You will find links to them on the collection pages.

MISSION

- replace throwaway things in people's lives with those that will "live" among people and together with people
- create something that will not harm people who use our products, those who produce them, and nature
- create interior elements that will only become more valuable over time, which can become a family member
- create what we ourselves want to proudly pass on to our children

VISION

- we use the most natural materials
- we restore consumed materials in the same amount that were used in production
- we do not sell but offer our products, so you want to buy them
- we design by ourselves
- we produce by ourselves

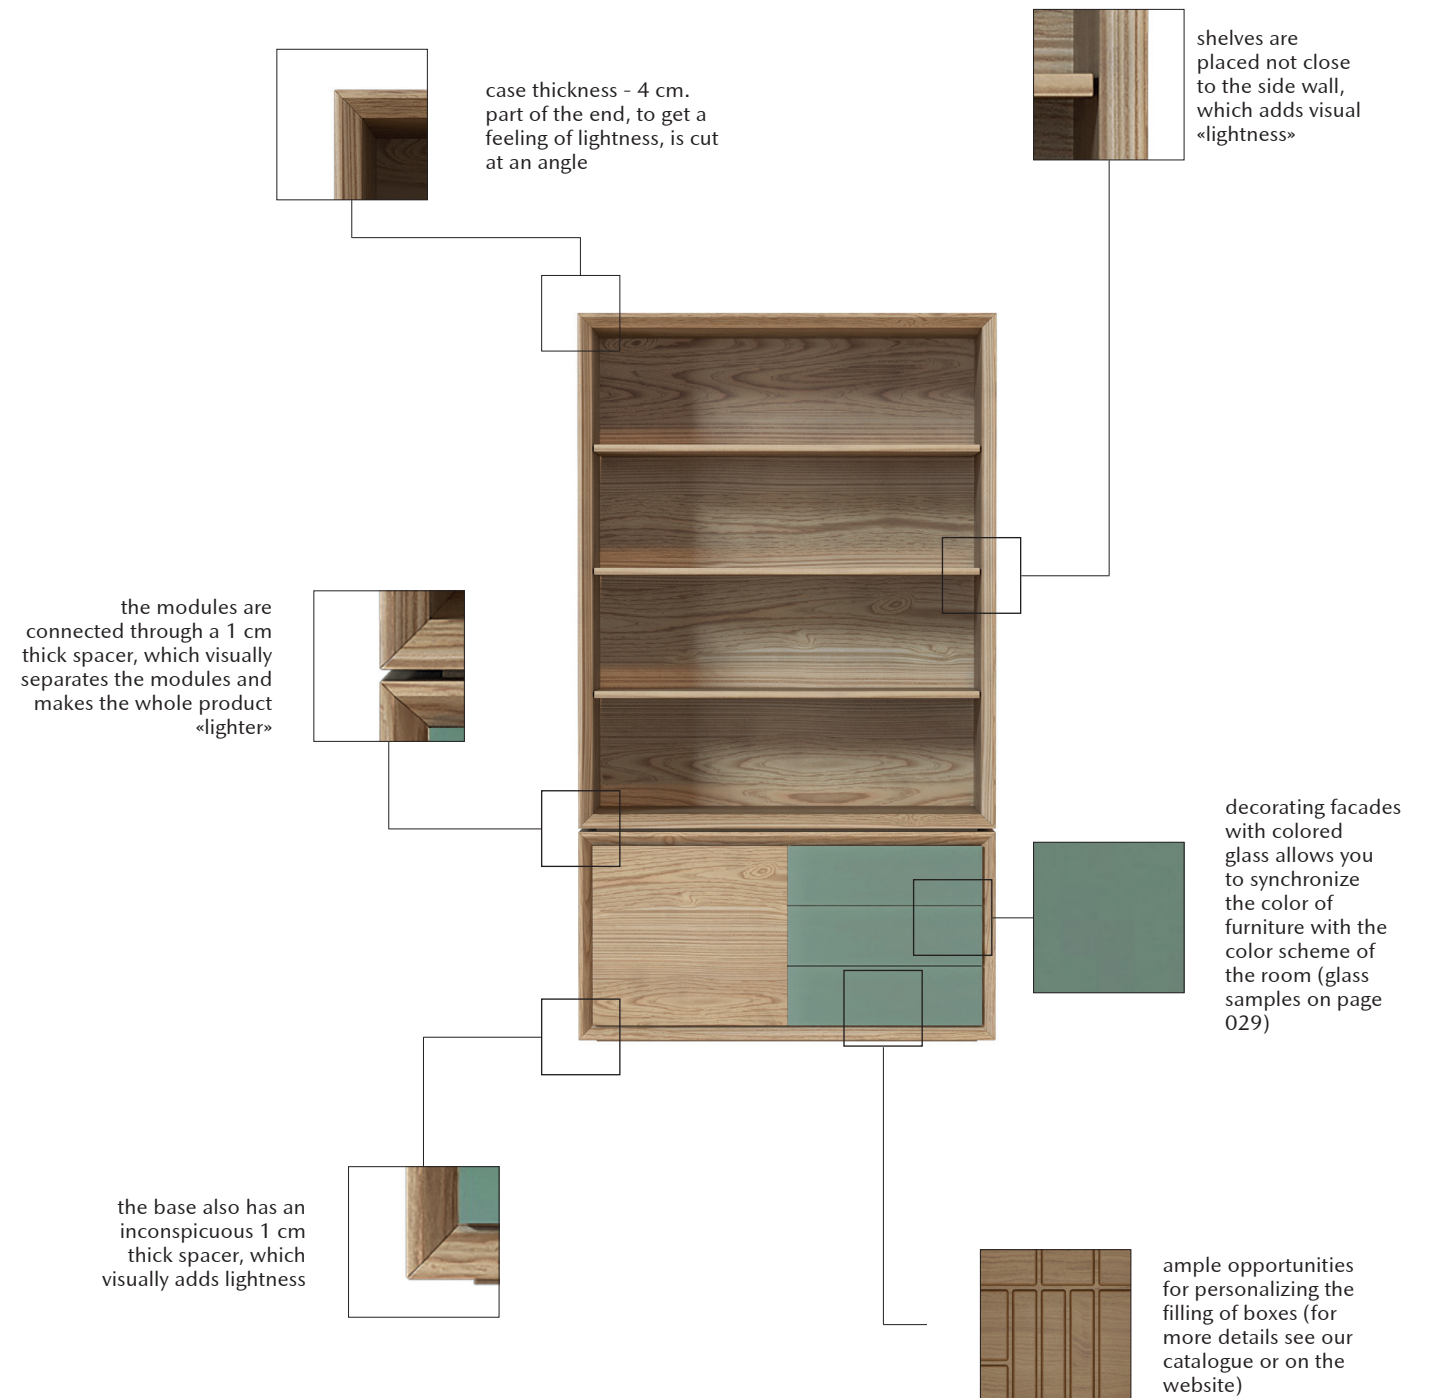

We don't hunt for customers. We are looking for like-minded people.

just M
collection

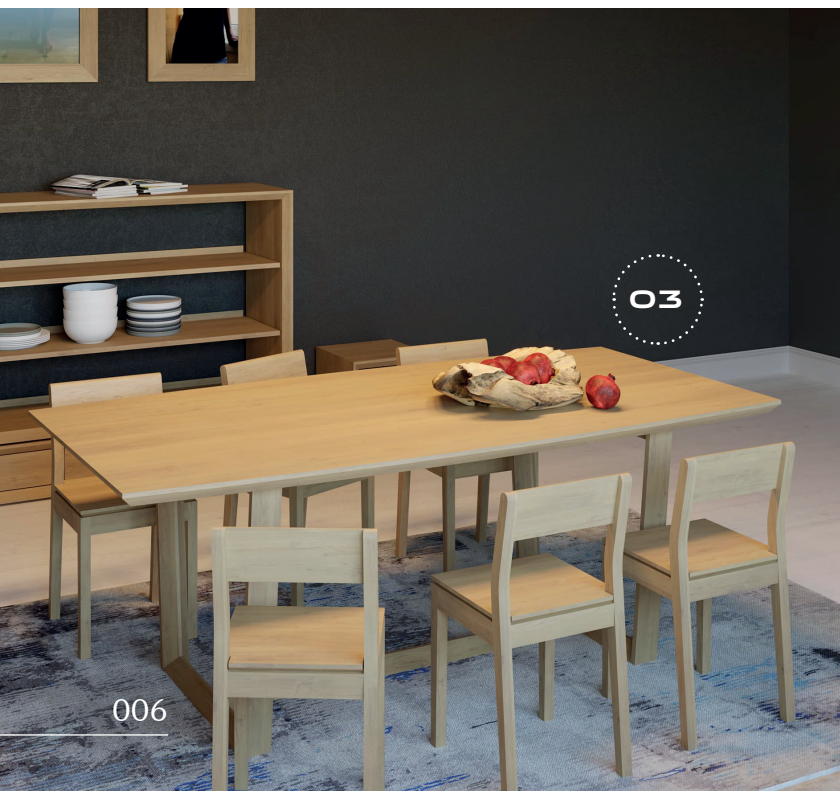

The just M collection is distinguished by a uniform thickness of the main parts, which is 4 cm. It stands out for the massiveness of the details, which is «softened» by the angular cut of a part of the face, while maintaining elegance. The collection includes furniture for the living room, study, bedroom, dining area and hallway. Many models have a wide range of options.

07 built-in washbasin, Villeroy & Boch, model Finion, **08** heated towel rail Laris, model Bonetta, **09** faucet Gessi, model MIMI

MATERIALS AND PROCESSES

WOOD

Wood and timber have always been and remain the most important elements of human life: trees create air for us, ships and even cars were made of wood, we use tree fruit for food, we build wooden houses, we make paper, and many other things, including furniture.

Natural wood can breathe, absorb moisture and slowly evaporate it back, thus creating a healthy indoor climate. Also, natural wood does not attract dust and absorbs odors, it has antistatic and antibacterial properties.

For the production of furniture, we use exclusively solid wood (except for the bottoms of the drawers and backs, for which we use birch plywood with natural veneer).

The furniture board is created in our workshop, taking into account the structure of the wood (which affects the technical properties of the furniture board, its stability) and a selection of the boards that make it up by their appearance.

ACCESSORIES

For doors and drawers, we install fittings from two Austrian companies - BLUM and GRASS - that have proven themselves and are well-known in our market.

The choice of a hardware manufacturer depends on the technical needs of a particular product.

GLASS

Glass in our furniture is presented in the form of shelves, decorative facades and glass doors. We cooperate with a representative of the longstanding AGC Japanese company. Tempered glass is used for the shelves.

In the manufacture of glass doors, SAFE + film is additionally used, which ensures safety in the event of mechanical damage to the glass (i.e., in the event of damage, the glass will not crumble on the floor of your house).

OIL

Following our vision, we use oils of the most natural composition for finishing our products.

Having tested the products of seven major oil producers on the Russian market, we opted for the products of the BIOFA German company. This oil is even certified for finishing children's toys.

VARNISH

To protect dining tables and bathroom furniture from the external environment and household chemicals, we use mat or gloss varnish at the request of the customer.

The varnish we use is produced by an American company, certified according to the strictest parameters of the United States and, according to the manufacturer, is safe for babies after drying.

ASSEMBLY

In the process of designing our furniture, we try to find a solution that will make our product setup. In this case, all elements of the products are glued together, which makes it possible to achieve:

- the most durable connection of parts (the glue seam is stronger than the wood itself)
- allows you to make a much more accurate fit of parts in comparison with a collapsible design

We manufacture bulky items such as beds, wardrobes, etc. in a partially disassembled construction. The connectors of the FESTOOL German company are used as connecting mechanisms.

GLASS OPTIONS¹

PURE WHITE

WARM BEIGE

LIGHT BROWN

SAGE GREEN

TERRACOTTA RED

CLASSIC BLACK

¹ There are two versions of glass: matt and glossy. This page contains samples in matte finish. Glossy glass has the same color, its samples are not given in this catalog due to the impossibility of transferring the gloss of the material in electronic or printed form.

² These samples represent wood species. Different types of wood have different color and texture parameters. The cost of the product can vary significantly depending on the type of wood used. All basic prices of products are indicated on our website for products made of European oak.

³ These samples represent European oak to which tinted oil has been applied. The cost of products when using tinted European oak does not differ from the cost when making products from non-tinted European oak.

The images are scans of real samples, made on professional equipment by high-level specialists. The possible difference between the image and the real physical sample is due to the difference in color rendering of the device on which you are viewing the images or the limitation of the color rendering of the paper catalog. We recommend that you personally look at the samples in our showroom, if it is convenient for you.

The image shows a minimalist interior space. On the left, a window reveals a lush green plant. In the center, a light-colored wooden shelving unit with various geometric compartments sits on a thick, grey concrete platform. The background is a large, textured grey wall. On the right, a set of stone steps leads up to a balcony area with a view of greenery. The overall atmosphere is clean, modern, and natural.
